DETAILED ACTION

1. Claims 36 and 37 are pending in this application. Claims 1-35 have been cancelled by preliminary amendment.

Drawings

2. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 8-19-02 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

Double Patenting

3. Claims 36 and 37 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 2 of U.S. Patent No. 6,052,465. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claim identical arrangements of a barcode and identifier on a disk. Although the claimed invention includes the limitation of the identifier and the information-bearing bar-code being in different locations on the disk whereas the instant application does not, the absence is not distinguishing since the identifier must of necessity be in a different location, even if just adjacent to the bar code, in order to be read and provide an indication of the presence of absence of the bar code.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 36 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 5,706,047 to Lentz et. al in view of US Patent 3,752,961 to Torrey and Official Notice taken as detailed below.

Lentz teaches an optical disk comprising a barcode like mark including a plurality of bars extending in a radial direction, in fig. 5 and fig. 6. Lentz does not teach inclusion of an identifier included in a control data area of an information area of a disk, for indicating whether or not said barcode is present or absent. Torrey does teach the use of an identifier used to indicate the presence or absence of a barcode, in fig. 1 item 4 "No Label Detector," and in claim 7 where an identifier sequence is used to denote the presence or absence of a bar code. Official Notice may be taken that the use of a control data area of a disk to write identifiers is a step that is old and well known in the art. Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have incorporated these features of Torrey and of which Official Notice has been taken into the system of Lentz. It would have been desirable to do so as this would allow for more rapid processing of data by preventing a disk reader from having to scan an entire sector of a disk searching for a barcode not present, inclusion of an identifier in a control data

area would facilitate greater information storage by not intruding on a data storage area of the disk.
